

APPENDIX B

Classification of New Jersey Waters as Related to Their Suitability for Trout December 2003¹

General Explanation

This classification was developed by the Bureau of Freshwater Fisheries under Project F-20-R, which was supported in part by Dingell-Johnson Federal-Aid-to-Fisheries funds administered by the U.S. Fish and Wildlife Service (USFWS). This report is periodically revised by the Bureau under Project F-48-R, "Investigations and Management of New Jersey's Freshwater Fisheries Resources", which is supported in part by Wallup-Breaux funds administered by the USFWS. Users should check with the Bureau to ensure that they have the most up-to-date version.

The official surface water classifications for the waters of the State are contained in the Surface Water Quality Standards (SWQS) adopted by the Department of Environmental Protection (N.J.A.C. 7:9B-1). A copy of this document may be obtained by calling (609) 984-0058, or by sending a written request to: DEP, Bureau Water Quality Standards and Assessments, P.O. Box 418, Trenton, NJ 08625, or online at <http://www.state.nj.us/dep>. Official verification of a surface water classification can be obtained from the Department's Office of Environmental Planning, Water Quality Standards, CN 418, Trenton, NJ 08625.

This report is divided into three parts. Part One of this report corresponds to the FW2 Trout Production (FW2-TP), FW2 Trout Maintenance (FW2-TM), and FW2 Non Trout (FW2-NT) classifications promulgated at N.J.A.C. 7:9B-1.15, with the following exceptions:

1. Some of the waters listed in Part One are classified in the SWQS as FW1 waters, Category 1 (C1) waters, Pinelands (PL) waters, saline waters of estuaries (SE), or as "Zones" of the mainstem Delaware River.
2. Some of the waters listed by name in the SWQS as FW2-TM or FW2-NT are not listed by name in Part One. In many cases where Part One lists an entire drainage as nontrout, individual waters in that drainage are listed by name in the SWQS. Even where Part One does not list an entire drainage as nontrout, there are some cases where the SWQS list FW2-TM or FW2-NT tributary waters that are not listed by name in Part One. However, the classifications of these waters in the SWQS are in Part One, through the use of the instructions presented below for the classification of waters that are not listed in Part One, are consistent.

¹ Pursuant to NJ Surface Water Quality Standards adopted 11/3/03)

To determine the classification of waters that are not listed in Part One, follow these instructions:

1. Unnamed or unlisted streams that flow into trout production, trout maintenance, or nontrout streams take the classification of the streams they enter.
2. All lakes, ponds, and reservoirs that are five or more acres in surface area, and that are not specifically listed as trout production or trout maintenance waters, are classified as nontrout. This includes impoundments on the main stems of trout maintenance or trout production streams (e.g., Saxton Lake on the Musconetcong River and Lake Solitude on the South Branch of the Raritan River).
3. All lakes, ponds, and reservoirs that are less than five acres in surface area, and that are upstream of and contiguous with trout production or trout maintenance streams, are classified as trout maintenance.
4. Unnamed or unlisted streams that enter lakes, ponds, and reservoirs take the classification of either the listed tributary stream flowing into the lake with the highest classification or the listed tributary stream leaving the lake with the highest classification, whichever has the highest classification, or if there are no listed tributary or outlet streams to the lake, the first listed stream downstream of the lake.

These instructions are similar to instructions given at N.J.A.C. 7:9B-1.15(b) in the SWQS. Reclassification of streams, tributaries, lakes, ponds or reservoirs may occur if sufficient evidence warrants it.

A symbol preceding a water listed in Part One indicates the following:

- * Nontrout water is located upstream of and flows into a trout maintenance water (in some cases, via another nontrout water).
- ** Trout maintenance or nontrout water is located upstream of and flows into a trout production water (in some cases, via another trout maintenance or nontrout water).
- + Listing for all or part of this drainage would be changed if a potential change listed in Part Four is adopted.

Part Two ("List of New Jersey Trout Production Waters With Resident Reproducing Trout Species Identified") lists the specific trout species that have been identified as reproducing in each trout production stream listed in Part One and Part Three.

Part Three ("Potential Reclassifications of New Jersey Waters as Related to Their Suitability for Trout") lists changes to the classifications recommended by the Bureau of Freshwater Fisheries. These changes may become official when the SWQS are next officially revised.
